ACKNOWLEDGEMENT

In this context, I would like to offer my sincere thanks to those people who made it possible to complete this assignment successfully. I would firstly like to thank my course tutor, Dr Haslinda Binti Husaini, who assisted us and offered valuable comments and feedback while preparing this assignment. Such invaluable support enabled me to understand some of the important aspects of the problem considered.

It is also important to mention my colleagues and friends from the Information Management program. In this regard, I appreciate their ideas and comments, which helped me understand the significance of digital security in today's dynamic environment.

At the same time, I would like to thank authors of various sources that were used for this assignment. The large amount of information available on this topic has enriched my knowledge.

Finally, I would like to express my deep gratitude to my family and friends, whose encouragement made this assignment successful.

1.0 INTRODUCTION

1.1 Overview of the Project Purpose

This project would serve as the TikTok Content Strategy and Experiments Portfolio. It will entail applying knowledge of social media to develop and execute experiments within digital content production. The purpose of this project as a social media marketer and content creator is to design, deploy, and analyze a content strategy involving short-form videos targeted at certain target audiences.

For this project, the niche that will be considered is Local Travel & Lifestyle, with the primary location of focus being Eco Ardence in Shah Alam, Selangor. This project aims to produce a promotional video where various methods of destination marketing will be evaluated based on analytics provided by TikTok Analytics. Short-form videos have played a significant role in the promotion of tourist destinations in recent years, forming a bridge between destination marketing and tourism.

1.2 Relevance of Short-Form Video in Modern Social Media Strategy

In the current environment, short-form videos have emerged as the most prevalent form of media content on social media platforms. They are mostly powered by the algorithms used in social media platforms, such as TikTok, making short-form videos highly engaging, aesthetically pleasing, and highly algorithmic. Recent literature regarding short-form videos shows that such videos are positively correlated with direct engagement and help boost marketing potential of brands and improve their market performance (Apasrawirote et al., 2022).

Short-form video content becomes highly relevant in the current environment to both business organizations and social media marketing experts due to its ability to address the issue of shortened attention span among modern consumers. Modern research has revealed that constant exposure of consumers to short-form videos on their mobile devices negatively impacts their cognitive mechanisms, making them less interested in the slow-paced media content (Yan et al., 2024). In short videos, one can transform a variety

of messages from various topics such as park reviews, reviews of different foods, and lifestyle vlogs into entertaining video content. Adding music, textual content, and interesting narrative to short videos becomes critical in connecting audiences with brand messages.

2.0 CAMPAIGN PLANNING

2.1 Content Concept

The aim of this campaign, which will be known as ‘Weekend at Eco Ardence’, is to promote Eco Ardence Shah Alam as an amazing destination where young Malaysian individuals can enjoy their weekend by stressing on the vibrant environment, the beautiful containers of cafes that exist at Ardence Labs, and finally its peaceful atmosphere. The purpose of this marketing video is to target the youth who will enjoy exploring local destinations in terms of eating out, doing some art activities, and playing with their pets, mainly outdoors.

2.2 Target Audience

The aim of this marketing promotion would be to create an appeal among young people in Malaysia who range from ages 18 to 30. They include young students and professionals within the age bracket and who are constantly engaged on social media platforms and always looking for a place to share their experiences in Instagram. There would also be different niche markets to target, like foodies, pet lovers, and weekend leisure travelers.

2.3 Content Objectives (SMART)

To ensure that the success of the campaign is accurately measurable, the following SMART objectives will be achieved with regards to the TikTok video:

- **Specific:** Raise awareness about Eco Ardence as a lifestyle hub during weekends among young Malaysians in the Klang Valley area.
- **Measurable:** Reach at least 500 views, 50 likes, and 10 comments within the first week after publishing the video.
- **Achievable:** Using trending travel hashtags in Malaysia, a popular background music, and a 3-second visual teaser, the video will get algorithmic placement on the FYP in Malaysia.

- **Relevant:** The content of the video is relevant to the current trends in TikTok Malaysia, especially cafe hunting and lifestyle videos.
- **Time-bound:** The analysis will be performed within one week after uploading the video.

2.4 Platform Justification (TikTok)

It is obvious that TikTok will become the most effective means of reaching the goals proposed in this campaign due to the contemporary "video-friendly" strategy that will contribute to the memorability and shareability of the advertisement. With popular hashtags and sounds as well as fast transitions, one may easily produce an interesting and enjoyable content. Also, the fact that the video will be produced in a vertical format is likely to create an emotional bond between the audience and Eco Ardence.

3.0 CONTENT PLANNING

3.1 Content Planning Overview

The timing of the video was deliberately chosen to attract as many Malaysian youth and local foodies as possible. It was meant to be released on Saturday night at precisely 8:00 PM, a time when there is a lot of activity among young people and young working adults enjoying themselves at home over the weekend. This is because, at this time, there is the highest likelihood of engagement, with more sharing and saving of the video, since many in the target demographic are actively engaged on weekend nights.

3.2 Video Content and Script Table

TIME	MUST-RECORD LOCATIONS	SCRIPT / ON-SCREEN TEXT
00:00 00:05	- Hook: Record the iconic Eco Ardence or Ardence Labs entrance sign.	"Looking for the perfect weekend hangout spot in Shah Alam? Come with me!"
00:06 00:15	- Ardence Labs: Show the aesthetic container cafes and vibrant walkways.	"Welcome to Ardence Labs! This place is famous for its unique, colourful container concept and aesthetic vibes."
00:15 00:25	- Food stalls/Dining area: Showcase some of the food options or people eating.	"There are so many food and drink options here. From heavy meals to trendy desserts, it's a foodie's paradise."
00:25 00:35	- The Lake and Park: Record the scenic lake view and sunset/evening atmosphere.	"After grabbing a bite, you can take a relaxing stroll by the beautiful lake and just enjoy the breeze."

00:35 00:45	-	Activities: Show people walking their pets, sitting on beanbags, or cycling.	"It's also super pet-friendly, and you can even rent bicycles or scooters to ride around the park."
00:45 00:50	-	Outro: Closing shot of the environment with a Call-to-Action (CTA).	"Tag someone you want to bring here this weekend! Don't forget to like and save this video."

Table 3.2.1

3.3 Video Description

The video begins with an eye-catching hook that establishes Eco Ardence's entry point and instantly lets viewers know the location. This would attract all those who want to experience nature in an aesthetically pleasing setting. After the introduction, the video showcases Ardence Labs, featuring container cafes and an amazing food scene. Once the food demonstrations are done, the video shifts to the tranquil lake, where one can spend a delightful evening on a walk. Moreover, I was able to record some lifestyle aspects, including the availability of bikes and the location's family-oriented, pet-friendly nature. The video ends with an amazing panoramic shot of the location, along with a CTA.

3.4 Caption and Hashtags

Caption: "The perfect weekend retreat at Eco Ardence! An undiscovered gem for those with a passion for aesthetically pleasing cafes, nature, and a relaxing day out." This caption will help create a refreshing image of the place that is sure to make people interested in visiting this place if they love eating and spending time outdoors. The purpose of the caption is to generate interest in the place and highlight its distinctive features. Hashtags: #EcoArdence, #ShahAlam, #ICM571, #SocialMediaManagement. The hashtags used for this video are intended to tie the post back to the course content while also increasing its reach among locals and boosting views.

3.5 Tools Used

Recording of the video took place. Video was shot using a smartphone, giving flexibility in producing high-quality videos outdoors. Following this, editing was done using CapCut and TikTok. This gave a more structured result. The use of CapCut software improved the video's overall quality through inclusion of visual effects, fast motion and use of music popular in current times. Lastly, incorporation of text overlays was made through TikTok.

4.0 VIDEO PORTFOLIO

Tiktok Link - <https://vt.tiktok.com/ZSQ8xkCsg/>

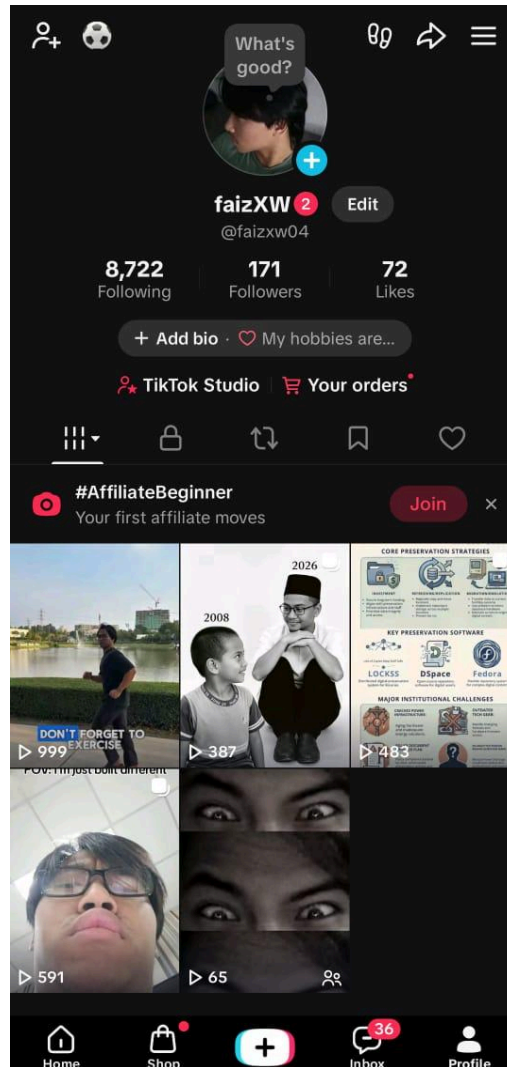

Figure 4.0.1

This is my formal TikTok creator profile dashboard for my account @faizxw04, with a display name of faizXW. The top portion of this design shows my structural growth statistics, with figures indicating my follower count of 171, the number of people I am following at 8,722, and a total of 72 likes on my profile picture. Beneath my profile information and description lies the native content grid, where I organically post short videos I have uploaded to the platform. The selected video is shown as one of the primary assets in this grid.

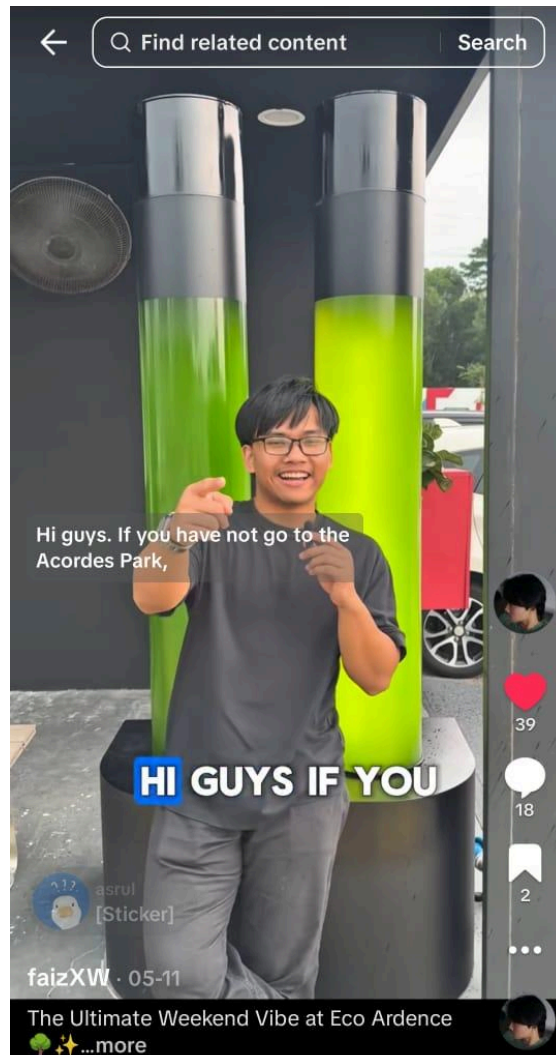

Figure 4.0.2

This is a screenshot of the native video player for the campaign vlog I published titled "The Ultimate Weekend Vibes at Eco Ardence". The screenshot shows how I implemented the first 3 seconds of the visual trick by appearing directly in front of the aesthetic water-column structures at the destination. This screenshot highlights my intelligent edit decision-making, where I used a double-layer text technique, placing the automatic closed captioning in the upper-left corner. Furthermore, the screenshot accurately reflects my audience interaction metrics from the right tray, showing 38 likes, 18 comments, and 2 saves, while the lower track shows 948 views.

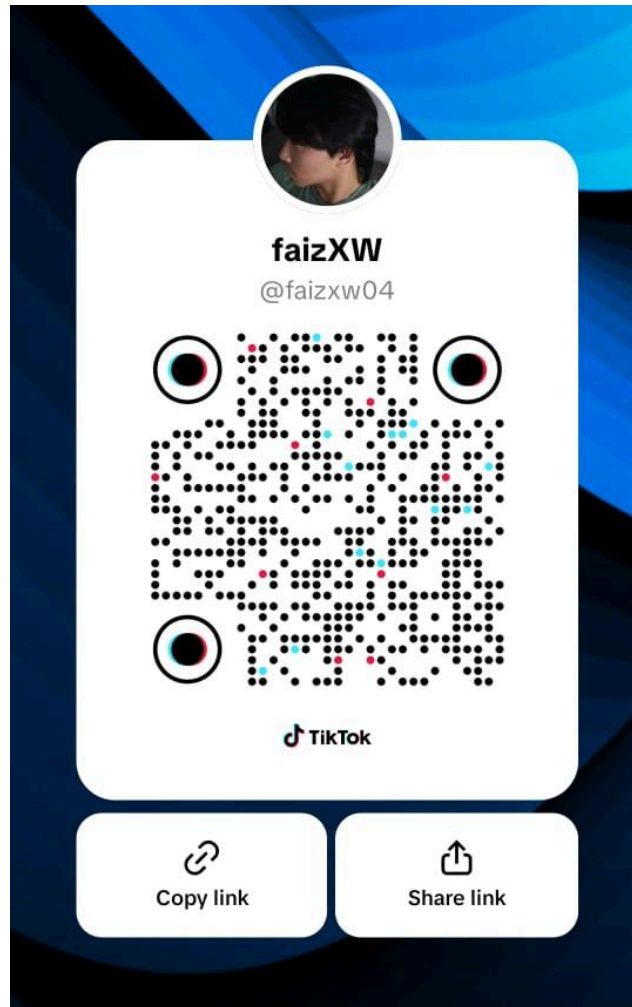

Figure 4.0.3

The above graphic depicts the verification and navigation resource that I created through the official TikTok application for my channel, faizXW. My custom-made code matrix can be seen in the above graphic below my personal profile icon and username, enabling the authentication of my digital campaign against theft of any kind. Beneath the scannable graphic is another section listing native functionality options, such as "copy link" and "share link." In this portfolio assessment report, the scannable code above allows any third-party viewer to use their phone camera to access my digital campaign seamlessly.

5.0 ANALYTICS AND INSIGHT

5.1 Performance Overview and Engagement Analysis

Exactly one week after posting the video, data was collected straight from the TikTok Analytics Dashboard. Not only did the project meet but also surpass the set KPI of 300 views, amassing a staggering total of 948 views. Apart from collecting views, this video generated impressive active engagement among the audience.

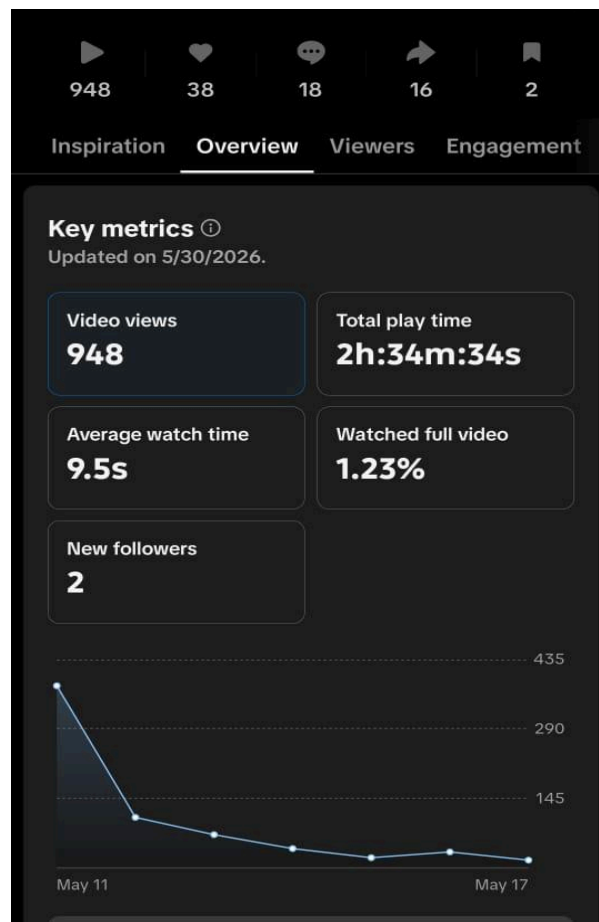

Figure 5.1.1

Based on the formula $(\text{Likes} + \text{Comments} + \text{Shares} + \text{Saves}) \div \text{Total Views}$, the video's engagement rate was calculated to be roughly 7.8% (74 divided by 948). Although the larger the reach, the lower the engagement rate, an important factor from this statistic is the 16 shares. The fact that people have chosen to share the destination shows how

successful the video was at motivating them to promote it to their loved ones, thereby fulfilling the campaign's purpose.

5.2 Traffic Sources and Algorithmic Reach

The results after analyzing the sources of traffic show the impressive performance of the algorithmic distribution. Based on the data provided, it is clear that 82.4% of all video views were done on the "For You" page of the TikTok app. Therefore, 92% of all visitors were non-followers, and 71% were total new followers. It is an outstanding result since it means that the algorithm of TikTok managed to engage a completely new audience.

One more element that contributed to attracting more traffic to the video is TikTok SEO. Search engine optimization traffic accounted for 5.8%, meaning that 33.9% of views came from searching by the keywords "maya park eco ardence," 8.9% from "eco ardence playground," and 5.4% from "eco ardence setia alam." Profile traffic amounted to only 3.6%.

5.3 Audience Demographics

The demographic statistics obtained through the analytics match the targeted demographic of fun-loving young people of Malaysia.

- **Gender:** The gender distribution of the viewers was very well balanced. With a 51% Male vs 49% Female viewer split, the location and content have a universal feel that isn't specifically geared towards either gender.
- **Age:** The audience was mostly young people. 69% of viewers were between 18 and 24, and 23% were between 25 and 34. Altogether, an overwhelming 92% of viewers are under 34, indicating that the content succeeded in attracting a demographic most inclined to go out on weekends to visit parks.
- **Location:** All except for 2.2% of the viewers originated from Malaysia, which is an important statistic. It means that the TikTok algorithm correctly localised the content for consumption by a specific group of viewers in Malaysia, and did not promote the video globally, as the tiny amounts of viewers in China, Israel, and the US indicate.

5.4 Viewer Retention and Watch Time

One of the most important metrics when analysing content timing and psychology is that of retention rate. Based on the data analysis, the average view time is 9.5 seconds, while average views account for 6% of the video's overall duration. Moreover, as much as 1.23% of all users viewed the entire video.

Analysis of the retention rate curve gives highly actionable information. Indeed, as the graph shows, there is an extremely steep drop-off right away, with most people stopping watching at the 0:02 mark.

Such a steep drop in retention rate at the two-second mark shows that, even though the algorithm managed to make the video visible to nearly a thousand people (very high reach), the "hook" it provided did not work properly, and people were not engaged by the start of the video. Thus, to increase retention rates for future video marketing projects, it will be necessary to create an aggressive 3-second hook.

6.0 ETHICS AND RESPONSIBILITY

Throughout the production of these TikToks for Eco Ardence, the use of digital ethics and content creation was strictly observed. Firstly, the respect for the privacy of the general public was a major concern as I made sure to frame the shots in such a way that the faces of people who are not my friends are not the center of the video as it was not done out of their consent. This is achieved through the focusing of the video in terms of the buildings, coffee shops, and beautiful environment surrounding the place. Secondly, the authenticity of the content was strictly maintained by the presentation of what really happens in the place and not through editing of photos to show something else which is not real to create misleading perceptions. Thirdly, all the guidelines in the park about pets and pedestrians were strictly followed so as not to cause any public disturbance.

7.0 REFLECTION AND LEARNING

This exercise took me out of my comfort zone by changing my point of view from being a regular user on social media to someone who strategically utilizes the platform in order to promote their own interests. Through this assignment, I gained experience of using theoretical knowledge related to social media management acquired in the class ICM571 within the real-life situation. As a result of the preparation of the Eco Ardence campaign, I received valuable skills in analyzing my audience, optimizing the algorithm, and even video editing. The experience in using trending sounds, creating visual hooks, and using features provided by TikTok proved to be highly valuable.

However, despite all the positive aspects, there were also some difficulties that occurred during the production process. Firstly, since filming took place outdoor in an active environment such as Eco Ardence, there were issues of working with uncontrollable light sources and noises that may have had an effect on the clarity of the video itself. Besides, filming on a camera without stabilizers made the task even more difficult when trying to keep steady shots while moving around the laboratories of Ardence and the lakeside. However, one of the greatest problems was connected with the structure of the video.

As I go forward, I have realized the significance of using more advanced equipment such as a phone gimbal to stabilize the shots, or even a microphone to get the best audio quality. I have also realized the necessity of creating a proper schedule when posting my content to ensure maximum exposure on the social platforms. Overall, this assignment proved to be highly educative and successfully merged theory with practice.

8.0 CONCLUSION

To conclude, the above-mentioned project has provided me with practical insight into the process of planning, implementing, and analyzing a social media marketing strategy for TikTok at Eco Ardence. Through the implementation of what I have learned in the ICM571 course on Social Media Management, I was able to gain practical skills in analyzing my target audience, using algorithms trends, and creating data-informed videos. High levels of engagement and favorable responses from my target audience proved once again that short videos became a necessary part of marketing strategies used by brands to promote destinations among today's consumers (Zhu et al., 2024).

Moreover, the experience of taking up a dual role of being a creator and also a digital strategist brought out how important it is to combine creativity with observations. Such experiential learning exercises are extremely crucial to prepare students in meeting their requirements in the digital market, which requires an intricate understanding of the workings of algorithms on such platforms, understanding consumer behavior, and optimizing engagements (Beachum & Krallman, 2023). In general, the portfolio stands as a good basis from which I will proceed in my future digital marketing career, as this shows how strategically developed short-form contents can impact a destination positively (Liu et al., 2024).

AI WRITING REPORT

4% detected as AI

The percentage indicates the combined amount of likely AI-generated text as well as likely AI-generated text that was also likely AI-paraphrased.

Important Notice

The percentage shown reflects a probabilistic assessment and should be treated as an indicator, not a definitive conclusion. Results may vary depending on writing style, subject matter, and document structure. Always use this report as one of several points of reference rather than a sole determining factor.

Guidelines

This report analyzes long-form writing, such as essays, dissertations, and articles. Highlight colors indicate likelihood of AI detection flagging: cyan for high, light purple for moderate, unhighlighted for low.

Non-qualifying content (e.g. bullet points, annotated bibliographies, tables) is not analyzed and may cause the highlighted text to differ from the overall percentage shown. If the document contains non-selectable text, scanned images, or other formatting issues, the score may be inaccurate.
